                                                                                                       New isolated receptor tyrosine kinase, CCK-4 - used for developing prods. for the diagnosis and treatment of CCK-4 signal transduction disorders, partic. colon cancer
                                                                                                                                                                                                                  A cDNA sequence (T45351) codes for a novel human receptor tyrosine kinase, colon carcinoma kinase-4 (W08747), or CCK-4, which is preferentially expressed in cancerous colon tissue, compared with normal colon. The cDNA sequence is a consensus of 6 overlapping CDNA clones isolated from a human placenta library using primers based on conserved motifs of protein tyrosine kinase catalytic domains. CCK-4 nucleic acids can be used in the prodn. of recombinant CCK-4 polypetides, and as probes in the diagnosis and screening of CCK-4 signal transduction disorders, esp. colon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó;

This cDNA clone includes a coding region for human Fanconi anaemia complementation group C (FAC, see W68546), a protein that modulates approposis in haematopoietic progenitor cells (HPC). The invention provides conjugates, including fusion proteins, comprising FAC and a targetting molecule which binds to a cell surface protein of the HPC and is internalised. Such targetting molecules include interleukin-3 (see W68547) and antibodies which recognise CD33 (see W68548-49). The conjugate, or a nucleic acid encoding it, can be used to deliver FAC to an HPC, specifically to inhibit apoptosis, particularly in patients exposed to high doses of chemotherapy for treatment of non-myeloid cancers, also to treat Fanconi anaemia (by complementation of the genetic defect). Treatment of HPC is done in vitro, ex vivo (e.g. for recombinant production of conjugate in cell cultures) or in vivo. Treatment with FAC may eliminate the need for extensive bone marrow transplants to restore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       melanoma antigen; MAGE TRA; melanoma antigen tumor rejection antigen;

                                                                                                                                                                                                                                                                                                 The sequences given in Q51426-28 represent cDNA varients from the Fanconi Anemia Group C Complementing (FACC) cDNA. These three cDNA molecules are cellular varients of a single cDNA transcribed from the same gene. The three cDNAs each contain an identical open reading frame encoding the FACC protein. The FACC protein may be used for the diagnosis and study of Fanconi anemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                     The sequences given in 032352-69 represent a new family of genes refered to as melanoma antigens (MAGE). The cDNAs of this gene family were identified during the isolation of the antigen E gene. The MAGE CDNAs, when tested, did not transfer expression of antigen E, but they did show substantial homology to the antigen E cDNA sequence. The MAGE DNAs share a certain degree of homology with each other and are expressed in tumour cells including several types of human tumor cells as well as in human tumors. MAGE expression is not restricted to melanomas. MAGE refers to a family of tumor rejection antigen precursors. The antigens resulting from these genes are referred to as MAGE TRAS or melanoma antigen tumor rejection antigens. See also Q32351.
                                                                                                                                                                                                                                                                                                                                           Gaps

Another melanoma antigen MAGE-3 is encoded by Q72470, this is a tumour rejection antigen precursor. Melanomas characterised by the expression of MAGE-3 can be detected, or, monitored, by contacting a test sample with an agent that can recognise MAGE-3. The melanoma can be treated by the administration of cytolytic T cells specific for the complex of antigen D (the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DER BRUGGEN P;

The present sequence is a DNA encoding Drosophila Lats (large tumour suppressor) protein which is a cell overproliferation inhibitor and angative regulator of cell cycle-dependent kinase cdc2/cyclin A. The present sequence is useful for treating cancer that is refractory to standard chemotherapy or radiation therapy such as hyperplasia, metaplasia, or dysplasia, and disorders associated with aberrant levels of cdc2 activity. Conditions treated by promoting cdc2 function include degenerative disorders, growth deficiencies, hypoproliferative disorders, physical trauma, lesions, and wounds. An animal model preferrably a mouse, in which a lats gene has been disrupted by homologous recombination, e.g. a lats knock-out mouse, is used for screening compounds that can be used to treat or prevent cancer, particularly skin cancer, soff tissue sarcomas and ovarian tumours, and disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              associated with pituitary dysfunction e.g. luteinizing hormone (LH) hypogonadotropic hypogonadism. The lats DNA is also used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of lats proteins, complexes of lats and cdc2 for treating cancer that is refractory to treatment by standard chemotherapy and radiation therapy, and disorders associated with aberrant levels of cdc2 activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence encodes the Drosophila melanogaster large tumour suppressor lats protein, and is a composite of 2 cDNAs (an initial fragment from cDNA-99 and the rest from cDNA-A2). The sequence has been isolated from a total imaginal disc cDNA library. The corresponding genomic sequence is identical, except for 34 minor differences, and has 7 introns. Two consensus polyadenylation sites are present. A 141-bp sequence at the 3'-end of the lats transcript is identical to the 5'-end of the untranslated sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated large tumour suppressor gene - used to develop prods for inhibiting cell proliferation or for enhancing proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                   /*tag- ay

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      to MAGE-1 - useful for hybridomas, recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A monoclonal antibody directed against the tumour rejection antigen (MAGE-1) can be used to detect MAGE-1 in samples by standard immunoassay methods for diagnosis and monitoring of cancer etc. The monoclonal antibody is designated MA454 and is produced by the hybridoma deposited as ATCC HBB11540. The monoclonal antibody is specific for MAGE-1, having no reactivity for MAGE-2 or MAGE-3. Peptide fragments of MAGE-1 (see R80618-20) may be useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide fragments of MAGE-1 (See R80618-20) may be useful as immunogens for production of the monoclonal antibody and antisera.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Boon-falleur T, Chen Y, Garin-chesa P, Old LJ; Rettig WJ; Stockert E, Van der bruggen P;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (V52134 to V52524) recorded to nit, or a repersentative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391 (V52134 to V52524) are genomic fragments from Streptococcus procumbinate. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced py a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequences: the computer readable medium can be used in a computer-based system for identifying fragments of the submoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Produces from the present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           used in diagnosis kits and assays, and pharmaceutical vaccines for S. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (RAM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a Kit for the immunodatection of saureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, oscenowielitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the
                                                                                                                           /note- "these bases represent a line of missing text in
the sequence listing in the specification. They
are included to maintain the nucleotide numbering
agreen in the specification for this DNA sequence"

```

```
070447 is the rat nestin gene encoding nestin protein (R60126).
Nestin protein expression distinguishes neural multipotential stem cells and brain tumour cells from the more differentiated neural. cell types (eg., neuronal, glial and muscle cells of the adult brian).
                                                              nestin gene; brain tumour; neoplastic cells; glial; neuronal; muscle; neural multipotential stem cell; mammalian brain; detection; diagnosis; medulloblastoma; gliablastoma; oligodendroglioma; ds.

```
This sequence represents a fragment of the genomic sequence containing the coding region for the mouse WRN gene (X83004). The corresponding human gene (X83001) encodes a protein related to Werner's syndrome. The products can be used for the detection and treatment of Werner's syndrome (WS), an autosomal recessive disorder with a complex phenotype,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             subunit vaccine; nucleic acid immunisation; gene therapy; genetic disease; hemophilia; cystic fibrosis; cancer; viral infection; acquired immune deficiency syndrome; PAV antigen; porcine pathogen; ds.

The present sequence represents the complete nucleotide sequence of the genome of porcine adenovirus-3 (PAV-3). The specification also describes a defective recombinant PAV vector comprising inverted terminal repeats (ITR), packaging sequences and at least one heterologous nucleotide sequence (II), but lacking El functions. The defective vectors replicate inefficiently in cells (other than helper cells) so are unlikely to be immunogenic. Deletion of the El (and optionally other regions) increases the size of heterologous insert that can be packaged. The PAV-3 increases the size of heterologous insert that can be packaged. The PAV-3 increases polymucleotides sequences are used to produce (recombinant or defective) vectors that can express heterologous proteins, e.g. for making live, recombinant virus or subunit vaccines, for nucleic acid immunisation or for gene therapy (e.g. of genetic diseases such as hemophilia or cystic for gene therapy (e.g. of genetic diseases such as hemophilia or cystic deficiency syndrome), also for in vitro expression of recombinant antigens (for antibody production), antisense RNA, ribozymes or therapeutic proteins. They are also used diagnostically to detect PAV antigens and/or nucleic acid. The vectors may be used in human or vetering the proteins and proteins and proteins and proteins and proteins proteins and proteins

They may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilisation (chemotaxis) of immune cells. The etiology of these immune deficiencies or disorders, ago be genetic, somatic, such as cancer or some autoimmune disorders, acquired (e.g. by chemotherapy or toxins), or infectious. They can also be used to treat inflammatory conditions, both chronic and acute conditions. The products can also be used for detection and diagnosis. 232002 to 232080, and Y49503 to Y49511 represent sequences given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                    New isolated metalloprotease thrombospondin polypeptides, useful for treating hyperproliferative disorders, cancers or autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                metalloprotease thrombospondin (METH) proteins METH1 and METH2 respectively. METH1 and METH2 have been found to be potent inhibitors angiogenesis both in vitro and in vivo. They can be used for treating cancer and other disorders related to angiogenesis including abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          wound healing, inflammation, rheumatoid arthritis, psoriasis, endometrial bleeding disorders, diabetic retinopathy, some forms of macula degeneration, haemanglomas, and arterial-venous malformations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             232000 and 232001 encode, and Y49501 and Y49502 represent, human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PCT-US91-06418-4/c

Sequence 4, Application PC/TUS9106418
GENERAL INFORMATION:
APPLICATION: Oklahoma Medical Research, Foundation, et al
TITLE OF INVENTION: Antigens Associated with Polymyositis
TITLE OF INVENTION: and with Dermatomyositis
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 575;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Indels
